SUGGESTED PROJECT FOR AERIAL INSPECTION SURVEYS

I. Determination of Existing Coverage - On separate overlays indicate coverage of the following types of aerial photography:

- A.
- B.
- C.
- D.
- E.
- F.
- G.
- H.
- I.
- J.

Each of the above are to be analyzed for the following and a summary thereof is to be placed on each appropriate overlay:

- A. Date of Coverage - or periods of years covered
- B. Scale
- C. Quantity in feet
- D. Area covered in square miles
- E. Quality
- F. Location of raw material (photography)

II. Target Requirements - Pinpoint all ARC Requirements on overlays. Requirements which have been covered will be placed on separate overlay from those not covered. The priority of targets is to be symbolized to distinguished between Super, Highest and Priority Targets.

III. Analysis

- A. A continuous analysis of photography is to be maintained in order to portray items of interest to the intelligence community not previously known. This is to provide the real significant impact of overflight.
- B. Whenever a proposal is made over given geographic areas an overlay of these limitations will be prepared. Targets covered and not covered in the area under consideration, as opposed to those not in these areas, may be tabulated in a relatively short period of time from these overlays.
